

Program 1:

Model a simple HTML file to demonstrate the use of different tags.

Program Code:

```
<html>

<head>

<title>html page</title>

</head>

<body bgcolor="grey">

<center><h1><b><u>HTML</u></b></h1></center>

<p>The hypertext markup language or HTML is the standard markup language for documents designed
to the displayed in web browser.it can be assisted by tecnologies such as cascading styling sheet and
scripting language such as javascript.</p>

<br>

<h3><center>html elements</center></h3>

<ol><li>FORMATING TAGS</li>

<ul>

<li>bold</li>

<li>superscript</li>

<li>subscript</li>

<li>underline</li>

</ul>

<li>image</li>

<li>list</li></ol>
```

```
<a href="impofhtml.html">IMPORTANCE OF HTML</a>
```

```
</body>
```

```
</html>
```

impofhtml.html:

```
<html>
```

```
<head><title>imp of html</title></head>
```

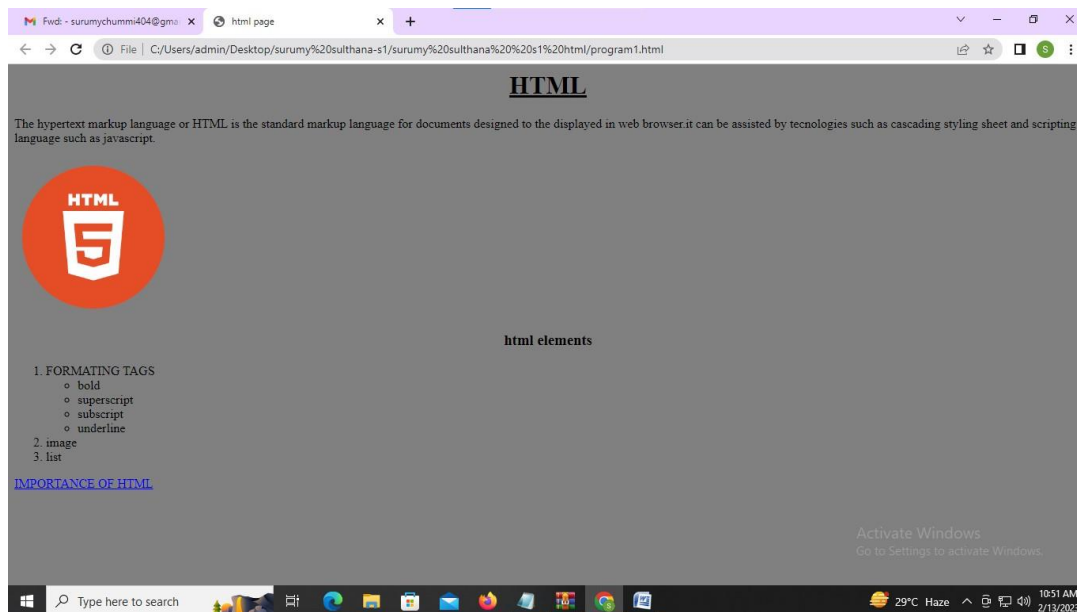

```
<body><h1><center><u>IMPORTANCE OF HTML</u></center></h1>
```

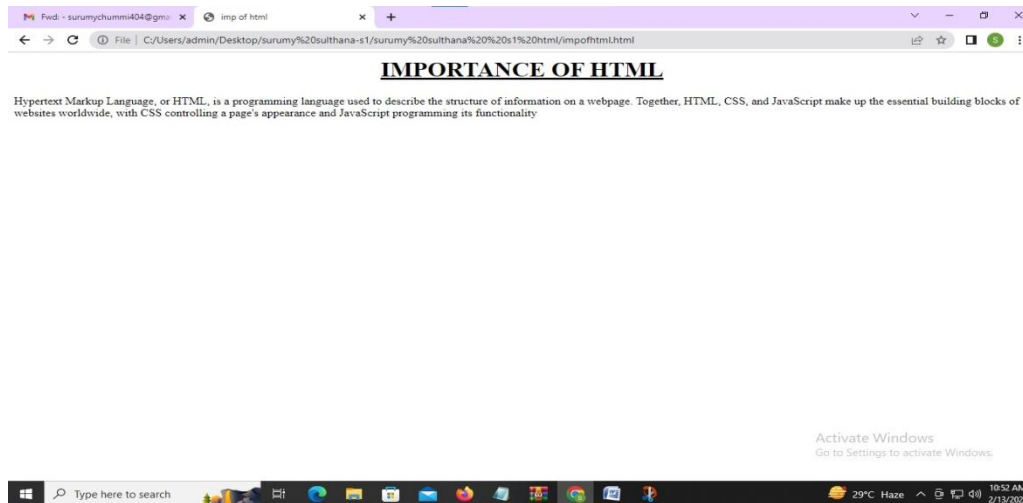

```
<p>Hypertext Markup Language, or HTML, is a programming language used to describe the structure of information on a webpage. Together, HTML, CSS, and JavaScript make up the essential building blocks of websites worldwide, with CSS controlling a page's appearance and JavaScript programming its functionality</p>
```

```
</body>
```

```
</html>
```

Output:

Program 2:

Create a HTML file to link to different HTML page which contains images, tables, and also link within a page.

Program Code:

<html>

<head>

<title>digital marketing</title>

</head>

<body bgcolor="blue">

<h1 style="color:white"><center><u>DIGITAL MARKETING</u></center></h1>

<p style="color:white">Digital marketing, also called online marketing, is the promotion of brands to connect with potential customers using the internet and other forms of digital communication.....

</table>

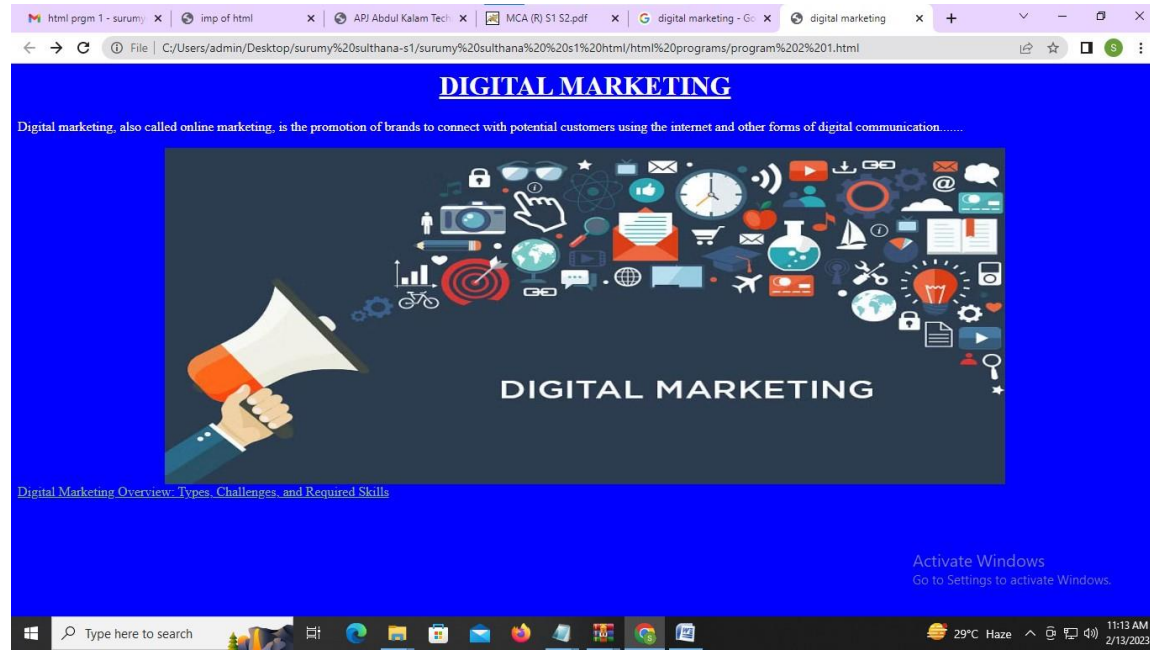

</center>

<a href="program2.html">home</a>
```

</body>

</html>

Output:

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'dm.html'. The address bar shows the file path: 'C:/Users/admin/Desktop/surumy%20sultana-s1/surumy%20sultana%20s1%20html/html%20programs/dm.html'. The page content features a yellow background with the title 'Digital Marketing Overview' in black, underlined. Below the title is a definition: 'The term digital marketing refers to the use of digital channels to market products and services in order to reach customers'. A large graphic of a cloud with the text 'DIGITAL MARKETING' inside is in the center. Surrounding the cloud are six icons representing different digital marketing channels: Social Media Marketing, Email Marketing, Bulk SMS, Display / Mobile Ads, Influencer Marketing, and Video Advertising. Below the graphic is a table with the following data:

Regno & Name	Course	Mark Obtained	Total Mark
22011 x	ML	Internal	39
		External	50
	CN	Internal	35
		External	45
Grand Total			169

At the bottom left, there is a 'home' link. At the bottom right, there is a 'Activate Windows' watermark.

Program 3

Create a HTML page with different types of frames such as floating frame, navigation frame & mixed frame.

Program Code:

Frame.html

```
<html>

<head>

<title> MES </title>

</head>

Program 7:

Compose Electricity bill from user input based on a given tariff using PHP.

Program code:

```
<html>

<head><style>input{border:solid 2px; padding:5px;font-size: 28px;}</style></head>

<body>

    <h1>Php - Calculate Electricity Bill</h1>

    <form method="post">

        <input type="number" width="10px" name="units" placeholder="Please enter no. of Units" />

        <input type="submit" name="unit-submit" value="Submit" />

    </form>

</body>

<?php

$result_str = $result = "";

if (isset($_POST['unit-submit'])) {
```

```

$units = $_POST['units'];

if (!empty($units)) {

    $result = calculate_bill($units);

    $result_str = '<h2>Total amount of ' . $units . ' - ' . $result."</h2>";

    echo $result_str;

}

}

function calculate_bill($units) {

    $unit_cost_first = 3.50;

    $unit_cost_second = 4.00;

    $unit_cost_third = 5.20;

    $unit_cost_fourth = 6.50;

    if($units <= 50) {

        $bill = $units * $unit_cost_first;

    }

    else if($units > 50 && $units <= 100) {

        $temp = 50 * $unit_cost_first;

        $remaining_units = $units - 50;

        $bill = $temp + ($remaining_units * $unit_cost_second);

    }

    else if($units > 100 && $units <= 200) {

        $temp = (50 * 3.5) + (100 * $unit_cost_second);

        $remaining_units = $units - 150;

        $bill = $temp + ($remaining_units * $unit_cost_third);

```

```
}  
  
else {  
  
    $temp = (50 * 3.5) + (100 * $unit_cost_second) + (100 * $unit_cost_third);  
  
    $remaining_units = $units - 250;  
  
    $bill = $temp + ($remaining_units * $unit_cost_fourth);  
  
}  
  
return number_format((float)$bill, 2, '.', '');  
}  
?>  
</html>
```

Output:

Php - Calculate Electricity Bill

Enter No Of Unit : 200

Submit

Amount Payable : 835.00

Program 8

Build a PHP code to store name of students in an array and display it using print_r function. Sort and Display the same using asort & arsort functions.

Program code:

```
<?php

$students=array("pra"=>"pranav","sha"=>"shaheen","mid"=>"midun","fala"=>"falahu","mush"=>"mushfique");

echo "<h2>";

print_r($students);

echo "<br><br>";

echo "The Array sorted using asort : <br>";

asort($students);

print_r($students);

echo "<br><br>";

echo "The Array sorted using arsort : <br>";

arsort($students);

print_r($students);

echo "</h2>";

?>
```

Output:

PHP - Students Names Sorting

Array ([pra] => pranav [sha] => shaheen [mid] => midun [fala] => falahu [mush] => mushfique)

The Array sorted using asort :

Array ([fala] => falahu [mid] => midun [mush] => mushfique [pra] => pranav [sha] => shaheen)

The Array sorted using arsort :

Array ([sha] => shaheen [pra] => pranav [mush] => mushfique [mid] => midun [fala] => falahu)

Program 9:

Build a PHP code to store name of Indian Cricket players in an array and display the same in HTML table.

Program code:

```
<html>

<head>

    <style>

        .c

        {

            border: solid 1px; font-size:28px; padding: 3;}

    </style>

</head>

<body>

<?php

$data= array(array('1','Sachin','Tendulkar'),array('2','Virat','Kohli'),array('3','MS','Dhoni'));

echo "<h1> Indian Cricket players </h1>";
```

```

echo "<table class=c>";

echo "<tr class=c><th class=c>NO</th><th class=c>First Name</th><th class=c>Last Name</th></tr>";

foreach ($data as $a)
{
    echo "<tr class=c>";

    foreach($a as $v)
    {
        echo "<td class=c>".$v."</td>";
    }

    echo "</tr>";
}

echo "</table>";

?>

</body>

</html>

```

Output:

Indian Cricket players

NO	First Name	Last Name
1	Sachin	Tendulkar
2	Virat	Kohli
3	MS	Dhoni

Program 10:

Develop a PHP program to connect to a database and retrieve data from a table and show the details in a neat format

Program code:

```
<?php

$con=mysqli_connect("localhost","root","","college");

if(!$con)

{

    echo "connection failed!";

}

$result=$con->query("select * from students");

if($result==false)

{

    echo "query failed!";

}

else

{

    echo "<h1><u> PHP - Database Connection </u></h1>";

    while($row=$result->fetch_object())

    {

        echo "<h2>".$row->studname." , ".$row->email." , ".$row->dob."</h2>";

    }

}

?>
```

SQL (RUN ON PHPMYADMIN)

CREATE DATABASE college;

CREATE TABLE students (id int PRIMARY KEY AUTO_INCREMENT , studname varchar (50) , email varchar (50) , dob date);

INSERT INTO students (id,studname,email,dob) VALUES (NULL, ' falahudeen p t', 'falahuddeen121@gmail.com', '2000-10-27');

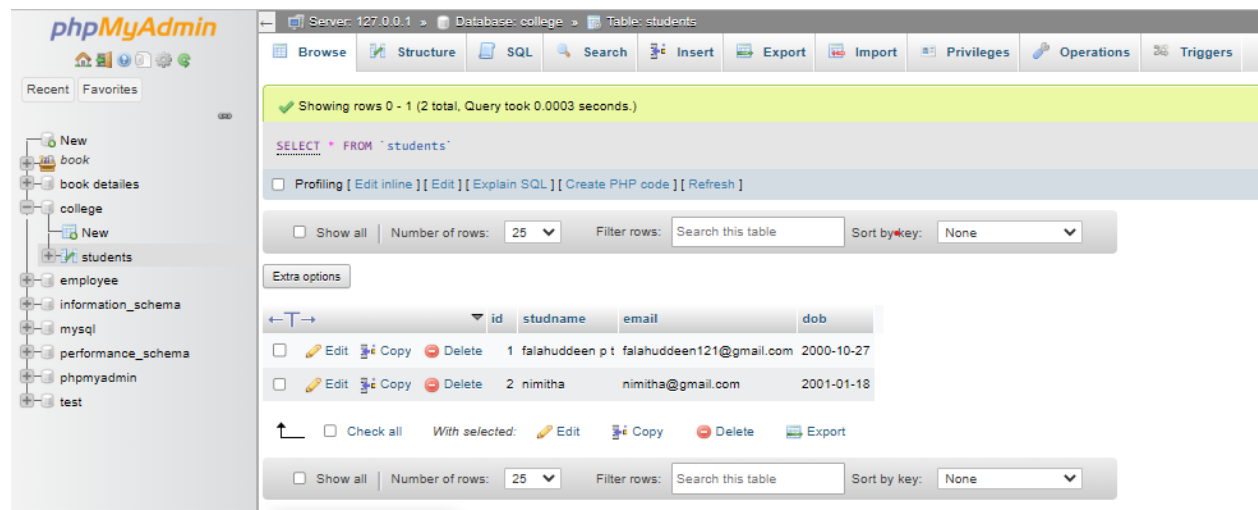

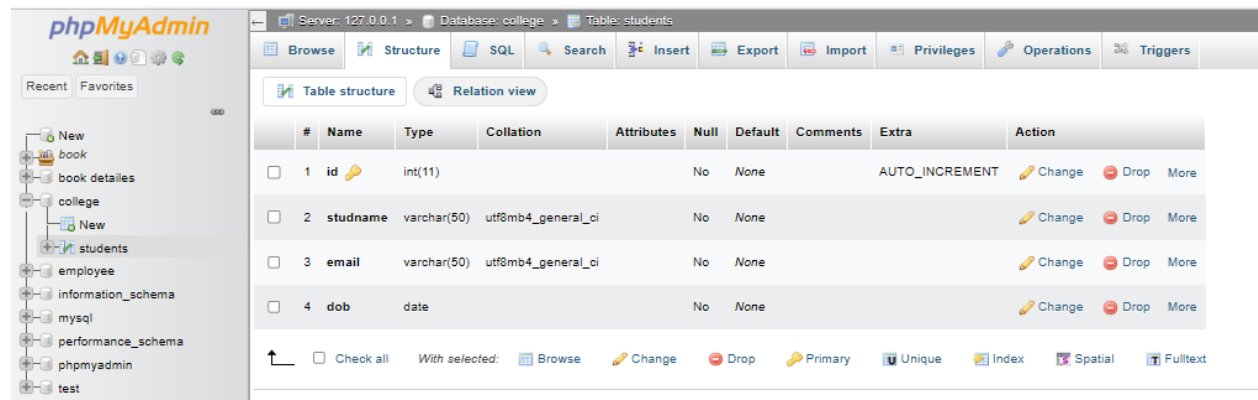

INSERT INTO students (id,studname,email,dob) VALUES (NULL, 'nimitha', 'nimitha@gmail.com', '2001-01-18');

Output:

PHP - Database Connection

falahuddeen p t , falahuddeen121@gmail.com , 2000-10-27

nimitha , nimitha@gmail.com , 2001-01-18

Program 11:

Create a HTML page to explain the use of various predefined functions in a string and math object in java script

Program code:

```
<html>
```

```
<body>
```

```
<p id="demo"></p>
```

```
<script>

document.write("<h3>STRING FUNCTIONS</h3>")

var string = "HELLO WELCOME TO HTML";

    document.write("The string is:"+string);

var length=string.length;

    document.write("</br></br>Length of the string<b>'string.slice(6,13)'</b>:"+length);

var slice=string.slice(6,13);

    document.write("</br></br>After string slicing:"+slice);

var replace= string.replace("HTML","JAVA");

    document.write("</br></br>After after replacing html to java:"+replace);
